

# Migrating Work Items from inMotion Classic

Published on 01/27/2022

This guide is for users of our inMotion Classic platform who are migrating their work data into Lytho Workflow. If you're importing new work items into your Workflow account, please use [this guide](https://lytho.knowledgeowl.com/help/task-management-importing-work-items) (https://lytho.knowledgeowl.com/help/task-management-importing-work-items).

Here are the steps involved with migrating data from inMotion Classic to Lytho Workflow:

- We will provide you with an export of your Classic work data
- You will prepare your ignite account and import your Classic data into ignite
- We will automatically copy project files from your Classic account to the newly-imported work in your ignite account within 7 days of the import

## Understanding Which Data Can Migrate

Our Customer Success team will provide you with an export of all of your data that can then be imported into Workflow. This export will be the driving factor in bringing your data from Workflow. For a better understanding of what we can import and cannot import, please reference the below table:

Can Import	Cannot Import	Collaborative Build Out
Projects	Requests	Intake Forms/Creative Briefs/Request Forms
Tasks	Proofs	Project Templates
Files	Review Annotations	Route Templates/Workflows
Users	Project Comments	Reports

## Getting Your Migration Data

Contact our Customer Success team to receive an export of your inMotion Classic account data. You will receive a project export CSV that looks something like this:

Work Item Name	Work Item Description	Work Item Type	Project Owner	Project ID	Assigned Users	Work Item Status	Started	Due	Completed	Tags	Loe	Archived Status	Custom Field (Departme
True Soap Fall Scents	All related work for new fall scent line	Project	christy@truesoap.co	123456	christy@truesoap.co,grace@tri	Completed	7/13/19 13:00	9/30/19 21:00	4/10/19 15:08	Fall Scents	13	Archived	Creative
Fall Scents Product Labels	New hand soap product labels for fall s	Task	christy@truesoap.co	123456	grace@truesoap.co	Completed	7/15/19 13:00	7/18/19 21:00	7/18/19 21:11		2	Archived	
Fall Scents Print Ad	Print ad for fall scents-full pagespread	Task	christy@truesoap.co	123456	grace@truesoap.co	Completed	8/10/19 13:00	8/25/19 21:00	8/27/19 10:17		4	Archived	
Review project templates	Review inMotion project templates for Task			234567	paul@truesoap.co	To Do		12/20/19 17:00				Not Archived	

Once you have your project export, use that same file to import that project and task history into your Workflow account.

The import limit is 500,000 rows of data.

## Readying Your Data and ignite Account

In order to successfully migrate your project and task data, there are a few things to check to ensure the process runs smoothly.

### Project ID

- Do not change any values in the **Project ID** column. **Project ID** is what we use to match your inMotion Classic files to your new Lytho Workflow account and your tasks to their associated projects.

### Users

- Ensure all users from your Classic account who you want to carry over have been added into your Workflow account.
- If you're pulling in work item history with users who are no longer active and want their names attached to your historical work data, add those users in Workflow, then deactivate them once you've imported your work items.
  - Otherwise, if it's not important to have those users' names attached to the projects and tasks they worked on, delete their email addresses from the **Project Owner** and/or **Assigned Users** fields, or replace them with an existing user.

The import limit is 100 Users.

### Custom Fields, Custom Work Statuses, and Tags

- Ensure that any custom fields and custom work statuses being referenced in your Classic account export have also been added to your Workflow account. If you use dropdown custom fields, make sure the dropdown options also match in your Workflow account.
- Tags do not have to be added to your Workflow account beforehand; any tags that you add to your Classic project export will automatically be added into your Workflow account when your data is migrated.
- Any data fields not found in your CS-given export will not be imported automatically. If you'd like to bring in additional fields, you can do so by utilizing Custom Fields. You can view the format of this column name [HERE](https://guide-ignite.inmotionnow.com/help/task-management-importing-work-items) (<https://guide-ignite.inmotionnow.com/help/task-management-importing-work-items>).

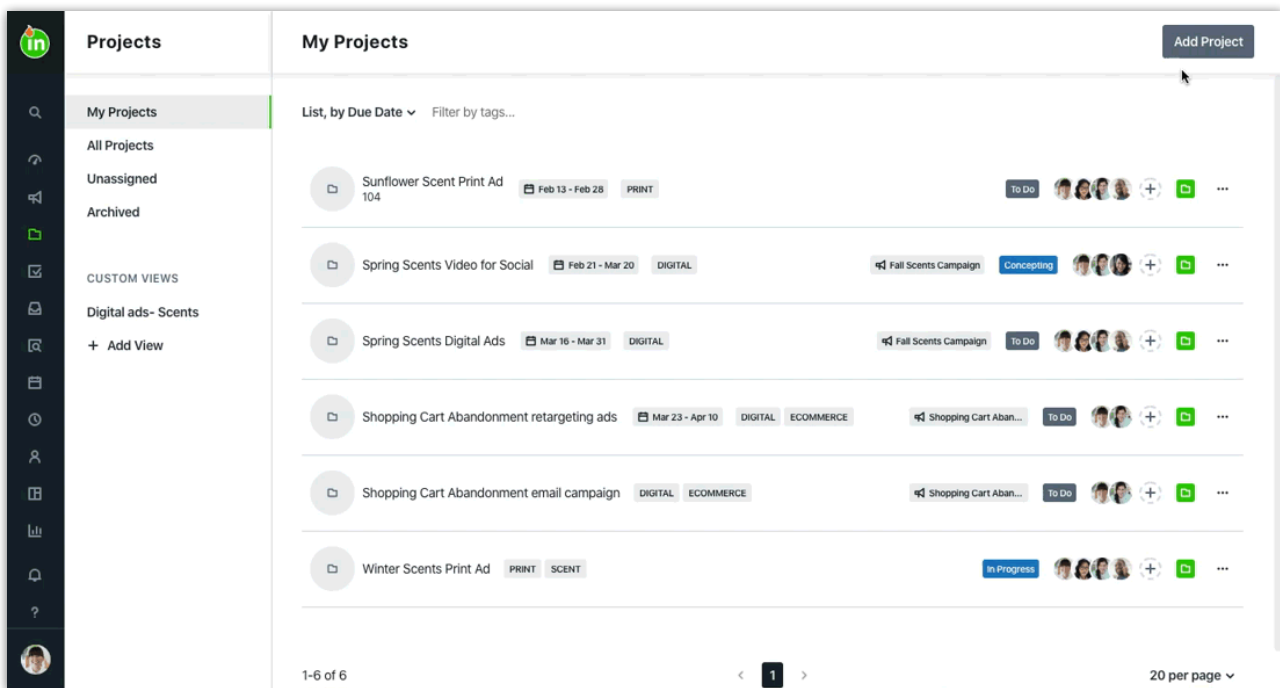

### Work that You Don't Want to Import

- If there are any projects or tasks you don't want to import to Workflow, delete those rows from your Classic project export. If you delete a project but not its associated tasks, those tasks will be imported to Workflow as standalone tasks that are not part of a project.

If you run into any errors when importing your Classic work item export, use the troubleshooting guide in [this article](https://lytho.knowledgeowl.com/help/task-management-importing-work-items) (<https://lytho.knowledgeowl.com/help/task-management-importing-work-items>).

## Migrating Your Data

Once you've got all your Classic data ready, go to Projects, then click **Add Project**, then **IMPORT** on the "Create Project" modal.

From here, upload your CSV to the "Create Project" modal and click **Import Work**. By default, the "Send email to users assigned to import work" option will be checked, but if you do **not** want those users to receive email notifications for these projects or tasks, uncheck the box before clicking **Import Work**.
