

Release Notes - June 24, 2019

Published on 01/27/2022

New Features

Attach a Link

Need to share a file that's in a DAM, cloud storage, or hosted online? Now wherever you can attach a file in inMotion ignite, you can also attach a link that connects directly to where an asset is stored. This deep linking allows you to connect ignite to any online storage solution or delivery platform!

Improvements

Searching on custom fields will now return any requests where those values appear in the content of the item.
