### Cycle Time for Work and Requests in Reports

Understanding how much time is spent in each stage of the project is crucial for your team to optimize their processes. Now, with cycle time available in reports for requests and work, you can see exactly how long it takes to get projects rolling and identify bottlenecks within your team's process. This includes seeing the amount of time from when a request is submitted to when it's approved, and the amount of time from when a request is approved to when a first proof is sent.

Project Overview				
Options				
1-12 of 12				
PROJECT NAME	TIME FROM REQUEST TO APPROVAL	TIME FROM APPROVAL TO FIRST PROOF	TIME IN "TO DO"	
TrueSoap Fall Campaign	14m			
Sunflower Social Media Video	2m			
Social Media Video - Sunflower	0m			
Sunflower Digital Ads	0m			
TrueSoap Spring 2019 Campaign			15d 22h 46m	
Sunflower Campaign				
Clean House Marketing Launch				
Email Campaign - Fall				
TrueSoap Fall Campaign				

## Advanced Filtering in Reports

Easily clear filters and only view the filters that are currently in use in a report.

## New Custom Field Types: Date & Number

Does your team track specific values or unique dates throughout the workflow? Now you can specify additional custom field types to automatically validate that the data is entered appropriately as a date or number.

### Create Custom Field

## Status Colors

Easily see the current status of a project at-a-glance with new icons at the top of the work item and color-coding to provide a more visual representation of the state of work within your workflow.

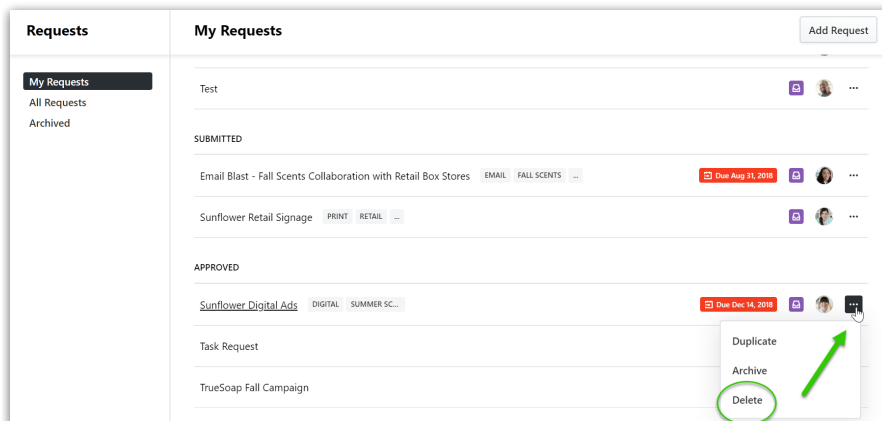

## Improvements

- New in-app notifications now prompt a subtle animation to call attention to new notifications
- Updated the icons for Start & Due dates
- Added new permission: **Delete Request**

- Requests that are *Approved* and *Completed* can now be deleted and any related work will be disassociated from the original request.

- Added work item badges to all work item detail views
